## PROFILE

Computer Science undergraduate at SRM Institute of Science and Technology with hands-on experience in **full-stack web development and applied machine learning**. Proficient in building scalable applications using **React.js, Next.js, Node.js, Express, and MongoDB**, with additional experience in deep learning using **TensorFlow and PyTorch**. Developed multiple web platforms and research-driven ML models, including ECG classification and satellite image cloud removal using hybrid GAN and Vision Transformer architectures.

## EDUCATION

|                                                                                              |                                     |
|----------------------------------------------------------------------------------------------|-------------------------------------|
| <b>SRM Institute of Science and Technology</b><br>B.Tech in Computer Science, CGPA - 8.76/10 | 2023 – 2027   Kattankulathur, India |
| <b>Swaraj Senior Secondary School</b><br>Class 12 - 78%                                      | 2023   Alwar, India                 |
| <b>Chinmaya Vidyalaya (E.M)</b><br>Class 10 - 91.4%                                          | 2021   Rourkela, India              |

## SKILLS

**Programming Languages:** C, C++, Python, Java  
**Web Development:** HTML, CSS, React.js, Next.js, Node.js, Express.js  
**Databases:** MongoDB, MySQL, Firebase  
**Machine Learning:** TensorFlow, PyTorch, CNNs, Data Preprocessing  
**Tools & Technologies:** Git, GitHub, Figma, VS Code  
**Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming, REST APIs

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>AR/VR Consultant Intern, PMKVY 4.0</b><br>• Contributed to development of <b>AR/VR training modules</b> creating immersive skill-development experiences for learners.<br>• Analyzed <b>user interaction data</b> to identify engagement patterns and recommend improvements in training delivery.<br>• Collaborated with the development team to support <b>integration of interactive simulations</b> into training programs.                                                                                                        | 2024 – 2025   Chennai, India |
| <b>AI/ML Intern, Google AI-ML Program</b> <br>• Applied <b>machine learning techniques for data preprocessing, feature engineering, and model evaluation</b> using Python tools.<br>• Built and experimented with <b>supervised learning models</b> to solve real-world problem statements from industry scenarios.<br>• Strengthened understanding of <b>end-to-end ML workflows</b> , including dataset preparation, model training, and evaluation. | 10/2024 – 12/2024   Remote   |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Grab Near -Digitalized Local Shopping</b><br>React.js, Node.js, Express.js, MySQL<br>• Developed a platform that helps users discover nearby stores within a <b>5–10 km range</b> and compare prices across multiple shops.<br>• Enabled customers to check store reviews and ratings to evaluate product quality and decide where to purchase locally.                        |
| <b>Rajasthan Roamers -Tourism Website</b> <br>• Designed and developed a tourism website for a client, showcasing travel destinations across Rajasthan.<br>• Implemented a <b>modern UI</b> with optimized navigation and mobile-friendly layout to improve accessibility and user experience. |

## RESEARCH EXPERIENCE

|                                                                                                                                                                                                                                                                                             |                                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>Hybrid GAN &amp; Vision Transformer for Cloud Removal in Sentinel-2</b><br>Developed a hybrid deep learning model combining U-Net, GANs, and Vision Transformers for <b>Sentinel-2</b> satellite cloud removal, achieving PSNR 33.3 dB and SSIM 0.96 ( <i>manuscript under review</i> ). | 12/2025 – 02/2026   Chennai, India |
| <b>ECG Classification Using Multi-Block CNN</b><br>Designed a four-block CNN architecture for ECG arrhythmia detection on the MIT-BIH dataset, <b>achieving 99.1%</b> classification accuracy with optimized inference ( <i>manuscript under review</i> ).                                  | 03/2025 – 05/2025   Chennai, India |

## ACHIEVEMENTS

- Qualified for the internal round of **Smart India Hackathon 2024** among 86,000+ participating teams, showcasing innovation and technical proficiency. 
- Awarded a Merit Certificate** for reaching the final round of the Technova Hackathon organized by ESSPL, recognizing excellence in innovation and technical problem-solving. 
- Secured a **Top 5** position among competing teams in **HackOdisha 5.0** and received a cash prize.

## CERTIFICATES

|                                                                                                                                      |                                                                                                                                                        |                                                                                                                                                             |
